Edge@Team

During an emergency, timely resolution saves lives. During daily activities, quick access to individuals and information cuts down on steps. Built to bring Incident Command System (ICS) best practices to the devices first responders use daily, @Team multimedia push-to-talk turns your iPhone or Android phone into an optimal situational awareness tool.

### Multimedia Advantage

**PUSH-TO-TALK PLUS**

@Team provides secure push-to-talk capability. But now imagine, rather than voice alone, your team is sharing photos, streaming video, even data files. That’s the @Team advantage of two-way video sharing.

**ONE-TO-MANY SHARING**

@Team supports one-to-many voice, video and data sharing in real time, securely. Each @Team user can also participate in Mutualink collaboration sessions with outside agencies through their agency’s Interoperable Workstation (IWS) or Edge IWS application with dispatch licensed and enabled appliance.

**BYOD EOIP & LOCATION SERVICE**

@Team runs on iPhone and Android phones using secure Everything-over-IP protocol. So now push-to-talk is more like push-to-see-talk. All forms of connectivity are supported. Geolocation maps show where your team is in real time (optional by device/user).

### Key App Features

**MULTIPLE TALK GROUPS**

@Team supports multiple talk groups per device, including managed and adhoc groups. Groups are always-on, with real-time access. Broadcast voice, video and text to all group members at once.

**TRUSTED INTEROPERABILITY**

With a track record of providing secure, adhoc interoperable communications to the public safety and critical infrastructure industry for years, Mutualink stands as a reliable partner.

**ACCESS TO THE IRAPP NETWORK**

As part of an agency-level Mutualink deployment, @Team users can participate in Interoperable Response and Preparedness Platform (IRAPP) network incidents. Join the hundreds of agencies that collaborate daily, for large planned events, and during emergency situations.

### Key Architecture Benefits

**SECURE & SCALABLE**

HIPPA-compliant, with triple-redundant military-grade AES-256 encryption, @Team protects communications from leakage or hacking. Virtual Private Network (VPN) for added security. @Team is a hosted solution, so users can be added as needed; agencies aren’t limited by capacity of on-premise solutions.

**FLEXIBLE ADMINISTRATION**

Each agency manages their own users from an Edge Device Manager (EDM), so roles can be changed as a dynamic event unfolds.

**EASY INSTALLATION**

Download iOS and Android apps from the App and Play Stores. Windows devices download from a Mutualink.net page. Activate using credentials supplied by your agency EDM administrator.
EDGE@TEAM: Multimedia Push-to-talk

Finally, Push-to-talk that works the way you need it to in today's broadband world. Send and receive video, one-to-many voice, data and text, always on, always secure.

Multimedia Advantage

- Multiple talk groups - managed or adhoc
- Always on, real-time communications
- Broadcast voice, video, text and data to a group
- Trusted interoperability provider
- Intuitive user experience
- Full multimedia collaboration: text, streaming video, data, location awareness. And voice, too.
- Send and receive video using your device camera or stored photo or files
- Software-as-a-Service deployment means no on-site installation
- Location services - locate your team members in real time
