FirstNet for healthcare: Priority access for critical communications

FirstNet® is the only nationwide communications platform built with and for public safety.

1. Virtual care solutions

FirstNet pushes telemedicine and remote patient monitoring, which improves your patient experience and can help spot health problems before they become too serious.

2. Health records and apps

FirstNet prioritizes access to the wireless network, which means ultra-fast access to a patient's Electronic Medical Records stored in the cloud.

3. Clinicians

Having priority access to the wireless network means that doctors can reach the department or person they need even when their patient is watching their phone while they wait.

4. Rapid deployment kits

FirstNet Push-to-Talk allows interoperability between LMR devices in addition to group calling all with priority access on the network.

5. Red Phones

FirstNet can replace or back up Red Phones.

6. Communications

FirstNet helps ensure that the connection between medical devices and the cellular network is prioritized.

7. Private Branch Exchange

Private Branch Exchange is a private telephone network used within an organization. FirstNet can extend that network access to smartphones.

8. Internet of Medical Things (IoMT)

In the Internet of Medical Things, a variety of objects can be turned into smart devices to enhance patient care. For example, those objects can include heart monitors, medications, and wheelchairs. FirstNet helps ensure that the connection between those devices and the cellular network is prioritized.

9. Emergency backups

FirstNet can help ensure that your hospital or mobile emergency unit is connected even if the power goes out.

10. Emergency Hot Spots

FirstNet can help ensure that your hospital or mobile emergency unit is connected even if the power goes out.
