FirstNet for healthcare: Priority access for critical communications

**FirstNet** is the only nationwide communications platform built with and for public safety.

1. **FirstNet prioritizes telemedicine and remote patient monitoring,** which improves your customer experience and can help spot health problems before they become too serious.

2. **Virtual care solutions**
   - FirstNet subscribers have priority access to the wireless network, which means ultra-fast access to a patient’s Electronic Medical Records stored in the cloud.

3. **Emergency backup**
   - Use a strategic launch to determine the best location for your hospital or mobile emergency unit's rapid deployment kit to avoid competing with commercial data traffic when you need to share critical information with trauma centers, helping to improve patient care.

4. **Citizens**
   - Having priority access to a patient’s records means you can quickly answer questions and save time for your patients and caregivers.

5. **Rapid deployment kits**
   - FirstNet offers rapid deployment kits that include pre-charged smartphones that are connected to the FirstNet network so even if the power goes out, your hospital or mobile emergency unit will still be connected.

6. **Communication**
   - FirstNet Push-to-Talk allows interoperability between LMR devices in addition to group calling all with priority access on the network.

7. **Red Phones**
   - FirstNet devices can replace or back up Red Phones.

8. **Internet of Medical Things (IoMT)**
   - Within the Internet of Medical Things, a variety of objects can be turned into smart devices to enhance patient care. For example, those objects can include heart monitors, medications, and wheelchairs. FirstNet helps ensure that the connection between those devices and the cellular network are prioritized.

9. **Private Brand Exchange**
   - Private Brand Exchange is a private telephone network used within an organization. FirstNet can extend that network access to smartphones.

10. **Emergency backups**
    - Online forms and e-signatures can help speed patient flow and allow you to request orders from pharmacies, labs, and other providers.
