

# FirstNet® for firefighters and EMTs

Finally, a network made  
to work in rural areas

**FIRSTNET.**

Built with AT&T

“FirstNet gives us the guarantee that on the worst day possible, public safety will have a resilient method for communication. ”

*Chief Brian Schaeffer, Spokane  
Fire Department, Spokane, WA*

Help keep your lines of communication open and secure with FirstNet. Whether you're conducting rescues, providing medical care, or fighting fires, spotty coverage won't be one of the dangers you face. We make it our mission to serve yours with a highly secure and reliable network dedicated to your community and communication needs.

More than  
**2.81 million**  
**square miles**  
**of LTE**  
**coverage,**  
nationwide

# Connect, on and off duty

4 ways FirstNet can help you

1

## Increase response readiness in remote areas

FirstNet helps you stay connected, on or off duty and across remote terrain. No need to compete with commercial traffic. With FirstNet, you cut through network congestion. As a firefighter and emergency medical technician, you have priority, and your needs preempt commercial users. Let FirstNet show you how to communicate with greater confidence.

**Go the distance** – FirstNet Band 14 service gives you the coverage and capacity to perform your duties wherever you go. Minimize the risk of disconnection far beyond the boundaries of your existing land mobile radio (LMR) footprint—especially in remote areas.

**Prioritize public safety** - We prioritize first responders' devices. So, you gain access to the network first and move public safety to the front of the line.

**Preempt commercial users** - Choose the network that puts first responders' needs ahead of others. Receive access to critical data through our automatic preemption capabilities. In extreme circumstances, we will move commercial users to different frequencies or momentarily disconnect them, so you can get through.

## 2 Simplify your shift

Help stretch limited resources. Let FirstNet smartphone apps save you time and effort. You'll appreciate their ease and efficiency, whether you're a digital native or tech newbie.

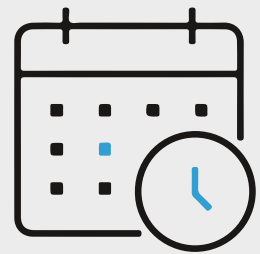

**Speed up routines** – Use FirstNet apps and devices to bring physicians on scene with live telemedicine, share GPS location for search and rescue missions, identify and safely manage hazardous materials, scan medication and assets and accomplish much more.

**Secure communication in the field** – Gain peace of mind with the only network designed with a defense-in-depth security strategy that goes well beyond standard commercial security measures. Capture and share data up and down the chain, knowing it's protected from the cell tower, through the backhaul, to the core and back again.

**Find what you need** – FirstNet offers a broad selection of vetted, secure public safety apps. Discover mobility fundamentals, live-saving tools and technology for increased awareness, resource management and engagement.

More than  
**200 FirstNet  
approved apps  
to date**  
**24x7x365  
monitoring**  
by trusted,  
experienced  
security  
professionals

## 3 Know before you go

Improve on-scene safety for you and those you serve. Rely on FirstNet to receive immediate information about the crash site, disaster, incident, or fire scene, well before you arrive and throughout the event.

**Enhance in-building wireless communications –**

Boost indoor network coverage with advanced small-cell technology.

**See what's happening in real time –**

Secure live-streaming video from vehicles and drones to provide a clearer operational picture.

**Easily locate people and assets –**

Track and map resources and personnel and even the vertical location of firefighters in buildings.

**Monitor vitals –**

Track the air pressure of each firefighter in real time and transmit alerts when air packs drop to dangerous levels.

“If you’re concerned about having good data, as data becomes more and more important to emergency services, then FirstNet is the way to go.”

*Fire Chief James M. Dodge, III Pound Ridge Fire Department, Pound Ridge, NY*

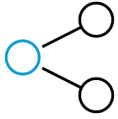

More than  
**120,000**  
**square feet**  
of newly  
added LTE  
coverage

## Experience frictionless mutual aid

Simplify intra-agency coordination and help improve outcomes with the interoperability of the wireless network built with, and for, first responders.

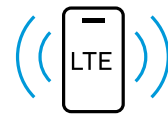

### Activate intra-agency responses

- FirstNet bridges many gaps on the technology front to dramatically improve communications between first responders, medical professionals, and your community at large.

**Quality of service** - High-quality Band 14 spectrum is reserved for public safety. FirstNet has built-in priority capabilities, so that firefighters and emergency medical technicians stay confidently connected even when commercial networks become overloaded.

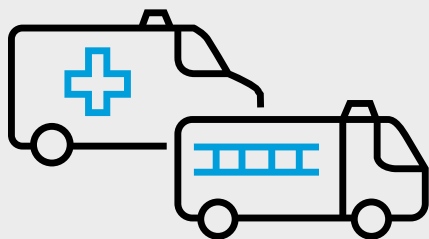

### Bring the network with you

- Turn to FirstNet for deployable SatCOLTs, LTE drones, and an LTE blimp for outdoor scenarios that require coverage beyond the fixed terrestrial network.

More than **21,800** public safety  
agency/organization subscribers  
A fleet of 80+ dedicated, deployable  
assets ready to roll
