

FirstNet® for law enforcement

A network for first responders
as committed as you.
Connect, on or off duty.

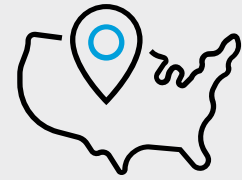

FIRSTNET®
Built with AT&T

Law enforcement professionals in rural communities are called on to protect around the clock, over remote areas, and against a wide range of vulnerabilities. You deliver a level of service that's always on and deserve a wireless network that operates the same way – that's FirstNet.

Upgrade to a highly reliable, interoperable, and secure public safety communications platform that connects and empowers the execution of your duties. Enhance your protective capabilities with innovative tools that enable deep, up-to-the minute information sharing, so you can make faster, better decisions.

The FirstNet wireless network reaches **99%** of U.S. population.

Help is here

Five things sheriffs need

1

Improve communications across remote areas

Make real-time connections on the scene and in the moment to improve awareness, *especially in remote terrain*. Powerful Band 14 service gives responders the coverage and capacity to perform their duties wherever they are needed, far beyond the boundaries of your existing Land Mobile Radio (LMR) footprint.

Here are a few ways FirstNet helps your team communicate:

Ability to *remotely monitor* FirstNet network status and view coverage in areas where responders are active or being deployed.

Access to dedicated, *ready-to-deploy mobile network assets* to boost communications during natural disasters, major planned events, or in remote locations.

Enhanced *in-building* wireless communications.

2 Enable faster responses

FirstNet is a force multiplier that gives your team reliable real-time connectivity across remote terrain to increase readiness and reduce response times. But congestion on commercial wireless networks during a large event, emergency, or weak coverage in remote locations can limit data access — and keep you from the vital information you need to respond.

FirstNet has advanced priority and preemption features that enable law enforcement to communicate with minimal or no interruption, giving their data the equivalent of “lights and sirens” to cut through network congestion.

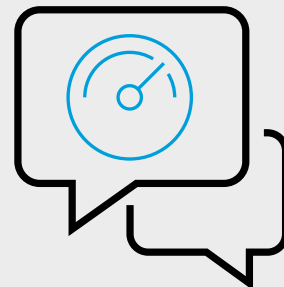

Priority

First responders' devices gain *access to the network first*, moving public safety to the front of the line.

Preemption

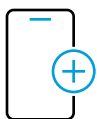

Public safety devices are treated as the *most important on the network*. Network resources cannot be taken from public safety. In extreme circumstances, commercial users are moved to different frequencies or may be momentarily disconnected.

From running a license plate to identifying where other officers are located, FirstNet **helps speed up responses to help improve safety and outcomes.**

Win the quest for “*more with less*”

FirstNet accelerates digital transformation by enabling modern features that drive real-time efficiency, optimize budgets, and increase your agency’s ability to protect.

Go mobile

Enable responder mobility and operational readiness

with tools that enable agency control, device-level security, and effective responder communications.

Be aware

Enhance mission execution and situational awareness with

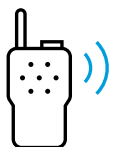

tools that help responders digitize their daily work, access external sources of information, and respond according to a common operating picture, shared across individuals, disciplines, and jurisdictions.

Do digital

Strengthen operating capacity and community engagement

with tools that use the FirstNet platform to deliver personal, professional, and operational resources to the field and leverage technology to make community engagement easier and more actionable.

Gain LMR to LTE interoperability with PTT

FirstNet offers a suite of voice, data, and video mission-critical *push-to-talk (PTT) capabilities*, so your mobile and LMR users can communicate seamlessly. This helps *improve productivity*, frees up LMR capacity, and extends your operational reach at a lower cost.

Simplify communications through IoT

Tapping into the internet of things (IoT) helps *improve response times and information sharing* by enabling you to connect all of your assets – fleet, alarms, embedded assets, and more – so that deployment, management, and monitoring are simpler, safer, faster, and more effective.

Secure data capture in the field

FirstNet has an extensive cellular footprint and end-to-end encryption that lets officers use mobile devices to *securely capture and transmit data in the field*. Law enforcement officers are using FirstNet apps and devices to scan driver’s licenses and registrations, record observations, document sworn witness statements, capture photos of incidents and crime scenes, upload data to digital management systems, dictate reports, and receive real-time information from incident command.

Over **21,800** public safety agency/organization subscribers.

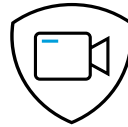

Protect those who protect with improved situational awareness

Dispatch deputies with confident FirstNet connectivity for up-to-the-minute details that improve situational awareness and add to on-scene safety.

Locational/spatial awareness

Improved *real-time tracking and mapping* of resources and personnel, including vertical location data for officers in buildings.

Visual dynamics

Secure live-streaming video from body-worn cameras, vehicles, and drones to provide a clearer operational picture.

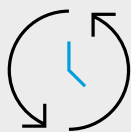

Quality of service, priority, and preemption

High-quality *Band 14 spectrum* is reserved for public safety. FirstNet has built-in priority and preemption capabilities, for first responders to stay confidently connected even when commercial networks are overloaded.

Security

Gain peace of mind with the only network offering comprehensive encryption and robust *end-to-end protection for sensitive data*.

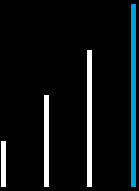

24x7x365 monitoring by trusted security experts

5 Boost abilities beyond emergency needs

FirstNet enables you to elevate community service and relationships with tools that bring ease and efficiency to the many ways your team serves.

Activate intra-agency responses

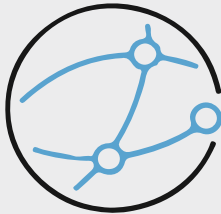

FirstNet bridges many gaps on the technology front to dramatically improve communications between first responders and your community at large. FirstNet helps simplify intra-agency coordination and improve outcomes with the *interoperability of the wireless network* built with, and for, first responders.

Mutual aid

FirstNet offers a high-speed, wireless network to *communicate and share data* with other public safety agencies and jurisdictions.

Initiate timely assistance with day-to-day operations, planned events, or emergency incidents, by easily sending requests for resources to other agencies that use the PTT solution, and add them to your talkgroups to simplify future collaboration.

Over 3.7
million FirstNet
connections

FirstNet for law enforcement – connect and stay ready to protect

Join the network built for emergencies and so much more. FirstNet is the way to connect with your team across remote areas and protect your neighbors in rural communities. Overcome service challenges and improve incident outcomes with the most widely used network for first responders.
