

# Esri Solutions on FirstNet Network

Esri® is active and proven on FirstNet, the network built for first-responders, providing powerful applications and location-based thought leadership. ArcGIS technology works on FirstNet enabled mobile devices – operated on either a fixed or portable broadband network.

Esri license holders enjoy a host of solutions at their fingertips, providing interoperability, field data and image collection, and real-time collaboration. Your secure data can now be used inside the network, on any device, at any time.

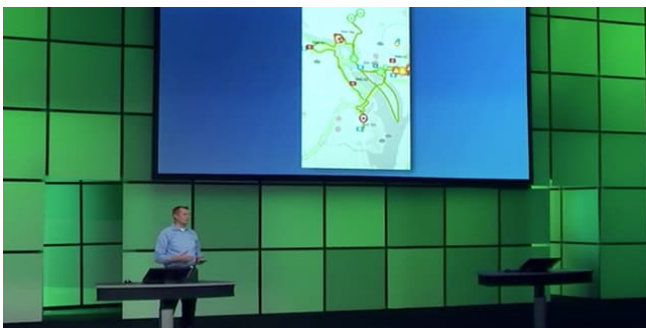

## Fire and EMS

Firefighters and emergency medical personnel can benefit from easy to configure solutions that enable fire hydrant inspection, pre-incident planning, and AED inventory. Fire personnel can configure their own fire run map which is used to create a complete fire run book for individual stations or fire districts.

## Law Enforcement

Law enforcement agencies can depend on solutions that maximize crime analysis and tactical planning templates which provide the command staff with easy to configure tactical operations for active shooters, barricaded gunmen, or other high-risk operations. Other solutions for law enforcement assist opioid abuse reporting and enable community engagement with public incident maps.

## Emergency Management

Emergency management professionals can lean on solutions that inform evolving critical real-time situations. By combining community impact reports and real-time data feeds, organizations can achieve situational awareness to better understand areas of impact. Dashboard configurations can be deployed by emergency management organizations and used by decision-makers throughout the organization. Additional emergency management solutions include pre-event planning, response, and recovery templates as well as public information applications.
