From routine to extreme: Keeping essential supplies moving

FirstNet® is a nationwide public-safety broadband network that helps make it easier for first responders and public safety officials to stay connected. It can mean the difference between life and death for drivers and road crews delivering food, fuel and relief supplies, clearing roads and assisting stranded drivers in emergencies and day-to-day operations.

FirstNet helps first responders, public safety officials, remote healthcare teams, and other mission-critical workers get the information they need, when they need it. It is the only network built with always-on, priority access and the nation’s most advanced communications capabilities available only on AT&T’s LTE network.

FirstNet has a special band of connectivity called Band 14, which is reserved by the government specifically for FirstNet. During an emergency, Band 14 can be locked and made available only to FirstNet subscribers.

FirstNet enables FirstNet-eligible transportation companies that support first responders to communicate with public safety across agencies and jurisdictions. It also supports the option to gain priority access to the network, helping to keep an open line of communication during an emergency.

FirstNet subscribers enjoy the option to purchase priority access and data-prioritization features to help support their critical communications needs.

**Operational priority access**
FirstNet enables transportation companies to communicate with public safety across agencies and jurisdictions, helping to keep an open line of communication during an emergency.

**Sensitive data is protected**
Operational priority access is available on FirstNet, a nationwide public safety communications network. FirstNet core is physically separate from commercial traffic, allowing end-to-end encryption.

**Secure connections**
FirstNet subscribers can purchase priority access and data-prioritization features to support their critical communications needs.

**Push-to-Talk**
FirstNet can be used with many land mobile radio (LMR) systems to extend coverage across jurisdictions, across the nation.

**Temporary service coverage**
In disaster areas, FirstNet蜂巢卡车™ and heavy-duty Satellite Cells on Light Trucks (SatCOLTs) provide temporary service.

**Use case:** A trucking company strengthens its emergency communication capabilities

**Problem:** A transportation company that delivers food, fuel and relief supplies wasn’t aware that one of its drivers was involved in a weather-related accident. The accident resulted in delays that impacted the company’s budget.

**Solution:** The company activated FirstNet to provide emergency coverage in rural areas and better coordinate with county and state emergency organizations, offering more peace of mind for drivers.

**Outcome:** There is now better emergency response for rural locations, and FirstNet has become a recruitment resource to attract new, quality drivers.

How does it work?
Federal funding for FirstNet enables FirstNet to unlock and extend network capacity across the entire 50 states, D.C., Puerto Rico, and other territories. The network expands coverage into areas that are often difficult for commercial carriers to provide reliable service.

Why is FirstNet right for me and my teams?
FirstNet subscribers enjoy the option to purchase priority access and data-prioritization features to help support their critical communications needs.
