Reliable communication is critical for first responders and those who support them. You need to collaborate with your team and other agencies for an effective response. In a fast-changing situation, you need quick access to information so you can make informed decisions. FirstNet Push-to-Talk (PTT) is the communications tool you need to help you meet these critical needs.

Mission-Critical Standards

We’ve built FirstNet PTT based on the public safety standards set by the Third Generation Partnership Project (3GPP). This is the body responsible for LTE and 5G global standards. In addition to voice services, FirstNet PTT’s rich, future capabilities will give you access to the timely and relevant information you need for enhanced situational awareness.

PTT Service on FirstNet

First Responders on FirstNet already receive First Priority™, which provides QoS, priority and preemption that exceed anything previously available to public safety. But with FirstNet PTT, we’ve given public safety PTT users the highest priority on the network\(^1\). So, in addition to getting priority and preemption on non-PTT calls, PTT calling will receive the highest level of priority\(^1\) for dependable, high performance group communications.

And FirstNet PTT is built right into the core of the FirstNet network. With PTT servers in six data centers across the country, your calls will be routed through the nearest node. This provides lower latency and faster access. We’ve designed this service and the data centers for redundancy during an outage. Engineered to the key performance indicators defined by the global standard, FirstNet PTT delivers low latency and high availability, resulting in superior calling performance.

In addition, FirstNet PTT provides:

- 1-to-1 calling
- Group calling
- Presence, so you can see who is online
- Up to 1,000 users per talkgroup (subject to network capacity)
- Ability to make emergency calls (which preempt other PTT calls) and to send emergency alerts
- Text messaging to groups or individuals
- Supervisory override, allowing a selected user to be prioritized in the queue while others are waiting to place a call
- Mutual aid capabilities, so you can request aid from another agency on the service

\(^1\) Other than mandated emergency calling.
Expand where you work and who you work with

**Nationwide coverage:** The FirstNet wireless network will reach 99% of Americans. So you can operate beyond your existing Land Mobile Radio (LMR) footprint.

**Automated Mutual Aid:** For help during day-to-day operations, planned events, or emergency incidents, you can send requests for resources to another agency that uses the Solution. Once you receive approval, you can see the other agency’s resources in your admin tool. Then you can include them in your talkgroups to help during mutual aid efforts.

**LMR to LTE interoperability (when available):** Your FirstNet PTT users can communicate seamlessly with users on your LMR network. This will help you improve productivity, free up LMR capacity and extend your operational reach at a lower cost.

**Devices, apps and accessories**

FirstNet PTT is supported on a broad selection of FirstNet Ready™ Android 4G LTE devices. This selection includes smartphones, feature phones, and ultra-rugged devices and depending on the manufacturer and device, supports:

- Dedicated buttons for PTT calling or declaring an emergency
- Ruggedized hardware
- Embedded PTT clients that are integrated into the device’s operating system
- PTT traffic prioritization on the device, helping deliver superior calling performance
- Diverse accessory options

This broad selection is designed to meet the needs of our customers - from first responders who need rugged PTT-centric devices to supporting team members using existing smartphones. Note that FirstNet PTT for iOS smartphones is under development.

All devices that support FirstNet PTT are tested and certified through the FirstNet device approval process. So you can buy with peace of mind. See the list of supported devices at [firstnet.com/push-to-talk/support](http://firstnet.com/push-to-talk/support).
Beyond Voice

FirstNet PTT opens the door to a future of choice and innovation. With features built on the Mission Critical standards, you’ll get access to capabilities that deliver flexibility, enhanced resources and greater situational awareness.

Moreover, we’re working to expand the offer to include:

- Wi-Fi calling - PTT calling over Wi-Fi networks
- Direct Mode, which supports:
  - Off-network communications
  - Group and 1:1 calling
  - Relay capability that connects to users not on the network
- Dispatch application, for more effective resource management
- User checks, to monitor signal and battery strength
- Ambient listening, so you can hear what is happening in the areas around the device of a team member
- Situational awareness, for a holistic view of an incident received via voice, images and data, including:
  - Location, so you can see nearby responders or utilities
  - Data, to send text and voice messages, pictures, PDFs and video clips
  - Video, to send and receive near real-time streaming video with users in your group, either 1:1 or from external sources

As the standards evolve, FirstNet PTT will evolve with them.

LMR to LTE Interoperability (when available)

Public safety entities can:

- Establish interoperability between LTE PTT users and existing LMR users
- Communicate with team members and personnel traveling outside the agency’s LMR footprint.
- Free up capacity on an LMR network nearing its limits

To set up LMR-LTE interoperability with a Radio over IP Gateway (RoIP), you’ll need to connect the gateway with a donor two-way radio, cabling and secured backhaul to the FirstNet PTT service. For backhaul connectivity to the FirstNet PTT platform you can use:

- Wireless data, using a FirstNet Mobile Unlimited Plan with First Priority®, to access the FirstNet PTT service, or
- An internet connection using a VPN to access FirstNet PTT (when available)

Separate charges for backhaul apply. Customer premise equipment sold by third parties and maybe billed by AT&T.
FirstNet Push-to-Talk
Powered By 3GPP Mission Critical Technology

Managing Your Service

Your administrator can manage existing users and FirstNet PTT usage through FirstNet Central. Administrators can create talk groups and contacts and push them to devices in near real-time. This helps to eliminate the need to physically configure individual devices.

Administrators can request Mutual Aid from other agencies and manage their users as simply as they manage their own, using the PTT Administration Tool.

And agencies that need help setting up FirstNet PTT can request the PTT Customer Administration Set Up and Training (CAST) service at no extra cost*. PTT CAST provides online, orientation courses on the PTT Admin Tool.

Security

FirstNet PTT is a highly secure 3GPP MCPTT compliant solution designed to meet the needs of first responders. The FirstNet network applies standard 128-bit LTE wireless encryption. In addition, FirstNet PTT applies Advanced Encryption Standard (AES)-256-bit encryption to voice, data and video.

Pricing

All prices exclude applicable taxes, fees, and surcharges. All fees paid are non-refundable.

(¹) Requires use of a FirstNet capable device and an existing qualified FirstNet wireless rate plan. Not eligible for contract-based discounts.
(²) “Unlimited” applies to use of FirstNet Push-to-Talk on AT&T’s U.S. domestic wireless data network footprint (including supported domestic roaming partners with a connection to the FirstNet Core). Such FirstNet PTT usage does not count as part of the usage or data allowance under FirstNet Wireless voice or data plans. Use of FirstNet PTT while roaming on partners who do not have a connection to the FirstNet Core is not supported.
(³) For full information, review the FirstNet PTT Only Rate Plan for Feature Phones at firstnet.com/mission-critical/firstnet-push-to-talk/rate-plans.html.

FirstNet PTT, powered by 3GPP Mission Critical technology, gives you high performance, high availability PTT calling on a nationwide LTE network. Rich future capabilities will provide you relevant information so you can make informed decisions and help keep your community safe.

*Limited time offer; may be withdrawn at any time
Important Information

General - FirstNet Push-to-Talk (PTT), as described in this product brief (the “Solution”) is available only to eligible customers with a qualified agreement (“Qualified Agreement”). The Solution is subject to (a) the terms and conditions found at www.firstnet.com/push-to-talk/blue-eula (“Additional Product Terms”), (b) the Qualified Agreement; and (c) applicable Sales Information. For government customers, any Additional Product Terms not allowable under applicable law will not apply, and the Qualified Agreement will control in the event of any material conflict between the Qualified Agreement and the Additional Product Terms. The Solution is available to FirstNet Public Safety Entities, their Agency Paid Users and their Subscriber Paid Users with a qualified FirstNet rate plan and a FirstNet PTT subscription, or with the FirstNet PTT Only Rate Plan for Feature Phones. The Solution may not be available for purchase in all sales channels or in all areas and may not be accessible at all times. Additional hardware, software, service and/or network connections may be required to access the Solution. Availability, accessibility, security, delivery, speed, timeliness, accuracy, and reliability are not guaranteed by AT&T.

Requirements – The Solution requires LTE wireless connectivity on the AT&T cellular network and the use of a supported wireless device. The FirstNet PTT client may already be installed on a supported wireless device. If not and when available, use of the Solution on supported feature phones, smartphones and tablet devices requires download and installation of the FirstNet PTT client software onto such devices. Management of the service via the Administration Tool requires the use of a supported browser on a suitable computing device. Use of the Solution requires a subscription to FirstNet PTT and a qualified FirstNet rate plan, or with the FirstNet PTT Only Rate Plan for Feature Phones. Data service/plan requirements vary by device category. Subscribers must have a FirstNet SIM card to use the PTT Solution, unless an exception has been granted. Subscribers who do not use a FirstNet SIM card will have limited or no access to the capabilities of the Solution.

When available, customers that wish to use the LMR to LTE interoperability capabilities of the Solution are required to purchase additional third-party equipment to complete the connections, which may include Radio over IP gateway equipment and software licenses and secured IP connectivity between the Customer’s location(s) and AT&T data centers, which may include wired Internet or wireless data connectivity.

Technical - PTT is not compatible with traditional circuit-switched voice calls or certain other FirstNet wireless services, including, without limitation, voice mail/Visual Voice Mail, AT&T Address Book, and Wireless Priority Service.

Wireless data coverage is not available in some areas. Wireless data coverage is subject to transmission limitations and terrain, system, capacity and other limitations. FirstNet PTT service is not available in areas served by certain Small Cell sites. Usage of the Solution on AT&T domestic roaming partners is dependent on the roaming partner having connectivity to the FirstNet Core.

When operating on such roaming partners’ networks, subscribed devices will indicate the service provider as AT&T or FirstNet. When roaming with domestic or international roaming partners that do not display AT&T or FirstNet as the service provider, FirstNet PTT service will not be available. If you are able to use FirstNet PTT while roaming on such partners’ networks, you will not receive traffic prioritization and other features of the Solution. Use of FirstNet PTT while roaming internationally will be charged at AT&T’s standard international roaming rates. The Solution may not work if a User attempts to access it via a custom Access Point Name (APN), and it will not work if accessed through a firewall or a VPN or from a network that does not meet the specified network access criteria.

The PTT application must be installed on a FirstNet certified device, and the device must be activated and turned on in order to originate and receive PTT calls. Use of non-certified devices is not - supported. A list of certified devices is available at www.firstnet.com/push-to-talk/support, which is subject to change. Not all service features and functionality, including prioritization on specific feature phones, are available on all certified devices. Other software on a User’s device may impair the PTT Service. The Solution is not compatible with devices provisioned through the Control Center platforms. See a FirstNet representative for details.

Usage - Data service/plan requirements vary by device category. Data usage incurred by FirstNet subscribers within AT&T’s U.S. domestic wireless data network footprint (including supported domestic roaming partners) in connection with the Solution will not be charged against the Customer’s associated data plan. All other data usage will be charged at AT&T’s scheduled rates.

Customer and its Users must accept the Additional Product Terms prior to installation and/or use of the Solution’s software. Customer must accept the Additional Product Terms as the party liable for each Agency Paid and Subscriber Paid User and agrees that such Users will comply with the obligations under those terms. Customer is responsible for providing each Agency Paid User of a subscribed mobile device with a copy of the Additional Product Terms. The Customer and its Agency Paid Users are individually and jointly liable thereunder. Unless otherwise prohibited, this offer is subject to change, and may be modified, terminated, or discontinued at any time without notice.

Data Privacy - Customer must comply with all applicable privacy, consumer data protection laws, marketing and data best practices, and all laws that apply to collecting, accessing, storing, processing, using, disclosing and securing user data, including any obligations to notify and obtain consents of Users regarding any Customer or AT&T access to Users’ personal information. Use of the Mutual Aid request feature gives Customers the ability to see the identity of other Solution Users and, if approved by the other customer, its users. Similarly, the identity of Customer will be visible to other customers, and Customer may make available the identity of its Users.

AT&T may use and distribute information regarding the use of the Solution both internally and to its pertinent suppliers to provide the Solution, in order to improve its product performance or to develop new products. Use of the Solution constitutes consent to AT&T’s limited use and distribution of Customers’ Solution information. The collection and use of such information is governed by the FirstNet Privacy Policy found at: https://www.firstnet.com/privacy-policy.
